## CST8285 Cheat Sheet

by WildRyc via cheatography.com/171551/cs/36006/

GIT commands		Regex		PHP - database connection	
git init	initialize an existing directory	^ or \A	Start of string	MYSQLi connection	
git clone [url]	retrieve an entire repository	\$ or \Z	end of string	\$dbc = mysqli _co nne ct( - \$host, \$user, \$pw, \$db);	
git status	show modified files in working directory	\b	word boundary	Query	
git add [file]	add a file as it looks now to your next commit	\B	Not word boundary	\$result = mysqli _qu ery - (\$dbc, \$query);	
git reset [file]	unstage af ile while retaining the changes in working directory	\s	white space	Close	
git diff	diff of what is changed but not staged	\S	not white space	mysqli _cl ose (\$dbc);	
git commit -m " [commit message]"	commit your staged content as a new commit snapshot	?=	look ahead		
git branch	list your branches, current has a *	?!	negative lookahead		
git branch [branch name]	create a new branch at the current commit	*	0 or more		
git checkout	switch to another branch	+	1 or more		
git merge [branch name]	merge the specified branch into current one	?	0 or 1		
git log	show all commits	{3}	exactly 3		
git push	transmit local branch commits to remote repo	{3,}	3 or more		
git pull	fetch and merge any commits from the remote repo	{3,5}	3, 4, or 5		
		[a-z]	lowercase a - z		
		[A-Z]	uppercase A-Z		
		[^abc]	not (a or b or c)		
		[0-7]	digits from 0 to 7		
		(a C)	a or C		
JavaScript Math Objects					
		Math.r	- x to nearest integer		
		round(x)			
		Math.p	- x to the power of y		
		pow(x,y)			
		Math.s	- square root of x		
		sqrt(x)			
		Math.a	- absolute  x		
		bs(x)			
		Math.r	- random number between 0		
		random()	(inclusive) to 1(exclusive)		
JavaScript String Objects					
		length	property	array.s or t(f unc tio n(a ,b) - {return a-b})	
		charAt(n)	method	array.s or t((a,b) =>{ a-b})	
		charCodeAt(n)	method	a-b = <b>positive</b> b sorted before value a	
		let a = " 10"; let b = 20; consol e.log(a + b)	1020	a-b = <b>negative</b> a sorted before value b	
		let a = " 10"; let b = 20; consol e.log(+a + b)	30	a-b = 0 items stay inthe same spot	
		let a = " 10"; let b = 20; consol e.log(a - b)	-10	array.f il ter (fu nct ion (el - element) {return (compa rison)})	
		let a = " 10"; let b = 20; consol e.log(a * b)	200	array.f il ter ((e lement) => {return (compa rison)});	
		let a = "CST82 85"; let b = 20; consol e.log(a - b)	NaN	array.m ap - ((i tem )=> - arr ay.k ey);	
				array.p us - h(v alue)	
				add value to end of array	
JavaScript Arrays					
		array.f il ter (fu nct ion (el - element) {return (compa rison)})			
		array.f il ter ((e lement) => {return (compa rison)});			
		array.m ap - ((i tem )=> - arr ay.k ey);			
		array.p us - h(v alue)

# Cheatography

## CST8285 Cheat Sheet

by WildRyc via cheatography.com/171551/cs/36006/

### JavaScript Arrays (cont)

array.pop()	remove value at end of array, returning value
array.unshift(v)	add value at start of array
array.shift()	remove value at start of array, returning value
array.splice(index, count, elements, ToDelete, valuesToAdd)	add or remove elements anywhere in the array and returns deleted elements if any

### PHP functions

isset()	test if variable exists
empty()	tests for empty variable
mysqli_fetch_array(\$result)	fetch each row of query
trim(\$string)	remove leading and trailing whitespace
file(\$fn)	read contents of \$fn, returns array of strings
file_get_contents(\$fn)	returns single string
file_put_contents(\$fn, \$data, \$mode)	write content from data to \$fn, using mode
file_exists(\$fn)	checks if \$fn exists
scandir(\$path)	returns array of lists of files and directories if \$path is valid, else false

### PHP functions (cont)

glob()	returns array of all file names that match pattern, with path
getcwd()	returns string of current working dir

### Cookies & Session

Cookies	
- limited in size by browser	
- stored client-side	
- can be disabled	
Sessions	
- limited by server space	
- stored server-side	
- expire when browser closed	
- cannot be modified by users	

### PHP Session Commands

session_start()	start a session
\$SESSION["variableName"]	store session variable
unset(\$_SESSION["variableName"])	remove session variable
session_destroy()	destroy session and all session variables

### JSON

easy to parse and generate	
can contain both object and array structures	
contain key and value pairs	
keys are always strings	

values can be string, number, Boolean, null, object, or array	
HAS no version, very stable, strictly in UNICODE	

Example object: \$json = ' { "Name": "Alex", "Age": 37, "Admin": true } ';

### JSON in PHP

json_encode()	convert PHP array to JSON array
JSON_FORCE_OBJECT - OBJECT	changes above to result in indexed array
json_decode(\$json, true))	JSON string to PHP array
json_decode(\$json, false)	JSON string to PHP object (default)
JSON.stringify()	take JS object and produce JSON string
JSON.parse()	take JSON string and produce JS object

### PHP Error Reporting

error_reporting()	types of errors reported
display_errors()	whether messages displayed in browser
log_errors	on server or somewhere else

### var | let | const

VAR	LET	CONST
function-scoped	block-scoped	block-scoped
updatable	updatable	not updatable
redeclarable	not redeclarable	not redeclarable
hoisted null	not hoisted
