

### Truth Table (AND)

AND	TRUE	FALSE
TRUE	True	False
FALSE	False	False

### Defining Exceptions

```
class LayerFilledException(exception):  
(indent) pass
```

### OOP

- The class Car inherits Vehicle. Hence, it will inherit all the function/method including drive.

- There is no need to define any function in Pickup\_Truck because all the functions can be inherited from both the super classes

- During initialisation, we have to take in all relevant arguments and call the super class init

- Calling superclass function:  
super( ).deliver(order)
