

Install Docker

```
$ sudo apt-get install docker
$ sudo apt-get install docker.io
```

With this two commands you can install all you need about Docker on you computer

Install Travis2Docker

```
$ pip install
git+https://github.com/Vauxoo/travis2docker.git
```

Run entrypoint without tests

```
TEST_ENABLE="0" /entrypoint.sh
```

Display coverage

```
# coverage report -m
# coverage report -m > coverage.out
```

Install a specific module

```
INCLUDE=module_name
/entrypoint.sh
```

ngrok (en segundo plano)

```
$ ngrok http 8069 > /dev/null &
$ curl
localhost:4040/api/tunnels 2>&1
| grep -Po 'http://[a-z0-9]
{8}.ngrok.io' | tail -1
```

You can run the second command in order to view current ngrok url address
