Python Ultimate Cheat Sheet

by Zahid Abbas via cheatography.com/190725/cs/39680/

COMMANDS

```
pip freeze >requirements.txt
```

```
mystr*2
```

```
's' in mystr
```

STRING METHODS

str.upper()	String to uppercase
-------------	---------------------

str.lower()	String to lowercase
-------------	---------------------

str.count('t')	Occurrences of element
----------------	------------------------

str.strip()	Strip whitespaces
-------------	-------------------

str.endswith()	Returns True if
----------------	-----------------

str.index()	Position of first occurrence
-------------	------------------------------

str.isdigit()	Returns True if all are digits
---------------	--------------------------------

SLICING

```
list[Initial:End:IndexJump]
```

```
my_list[1:3] Select items at index 1 and 2
```

```
my_list[1:] Select items after index 0
```

```
my_list[:3] Select items before index 3
```

```
my_list[:] Copy my_list
```

LISTS

```
nums=[2,3,4,5]
```

nums.append(6)	Adds 6 to the end
----------------	-------------------

insert(0,6)	Adds 6 at index position of 0
-------------	-------------------------------

nums.remove(6)	Removes 6
----------------	-----------

nums.pop()	Removes the last item
------------	-----------------------

nums.clear()	Removes all the items
--------------	-----------------------

nums.index(8)	Returns the index of first 8
---------------	------------------------------

nums.sort()	Sorts the list
-------------	----------------

nums.reverse()	Reverses the list
----------------	-------------------

nums.copy()	Returns a copy of the list
-------------	----------------------------

del lis[2:5]	Deletes elements in range
--------------	---------------------------

nums.extend(b)	Extend existing list with list b
----------------	----------------------------------

ADVANCE LISTS

Removing duplicates

Use `dict.fromkeys()` function to convert list into dictionary with list elements as keys. Then convert the dictionary back to list.

```
list=['a', 'b', 'c', 'b', 'a']
```

```
list_2 = list(dict.fromkeys(list))
```

Filtering a list

```
list = [item for item in m_list if item > 20]
```

Combining lists

Each item from list A is combined with corresponding elements from list B in the form of a tuple.

```
comb_list = list(zip(list_1, list_2))
```

Finding the most common item

```
list = ['a', 'a', 'a', 'd', 'd', 'e']
```

```
frequent = max(set(list), key=list.count)
```

Flatten a list of lists

comprehension-to convert a list of lists into single list.

```
list=[item for List in listOfList for item in List]
```

PYTHON

this is it if than.

RANGE

```
range(5)
```

```
| Returns sequence from 0 to 4
```

```
range(2000,2018)
```

```
| Returns a sequence from 2000 to 2017
```

```
range(0,11,2)
```

```
| Returns seq. from 0 to 10 with increment of 2
```

```
range(0,-10,-1)
```

```
| Returns a sequence from 0 to -9
```

```
list(range(5))
```

```
| Returns a list from 0 to 4
```
